NxSAM
OVERVIEW

NxSAM (Next Generation Security Audit and Management) is a Centralized Audit Management solution that enhances the efficiency and intelligence of the vulnerability life cycle management. It is a comprehensive security and audit management solution which enables organizations to track any vulnerability through all its audit stages right from discovery to closure.

Benefits of NxSAM

It automatically creates asset-wise action items based on the security reports.

It builds a consolidated list and statistics of security vulnerabilities with several data mining options.

It provides complete visibility into audit processes and metrics for better risk management and assured compliance.
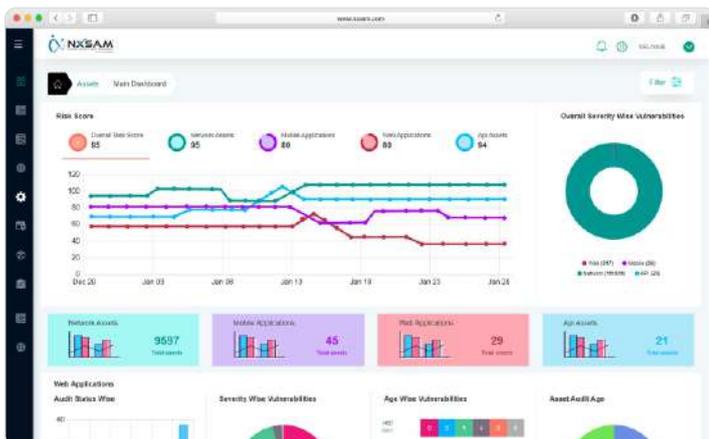

It offers real-time status based on the actions taken by the application teams.

It facilitates a closed-loop audit cycle for recording findings, developing recommendations, and implementing action plans.
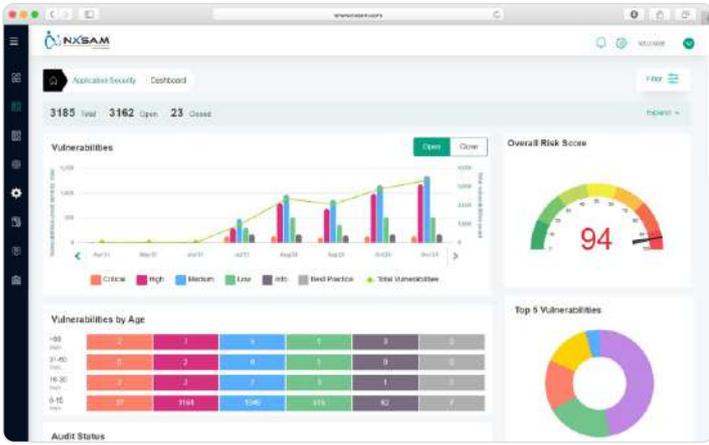

It helps businesses lay the foundation for better management of issues caused by audit, risk, and compliance.

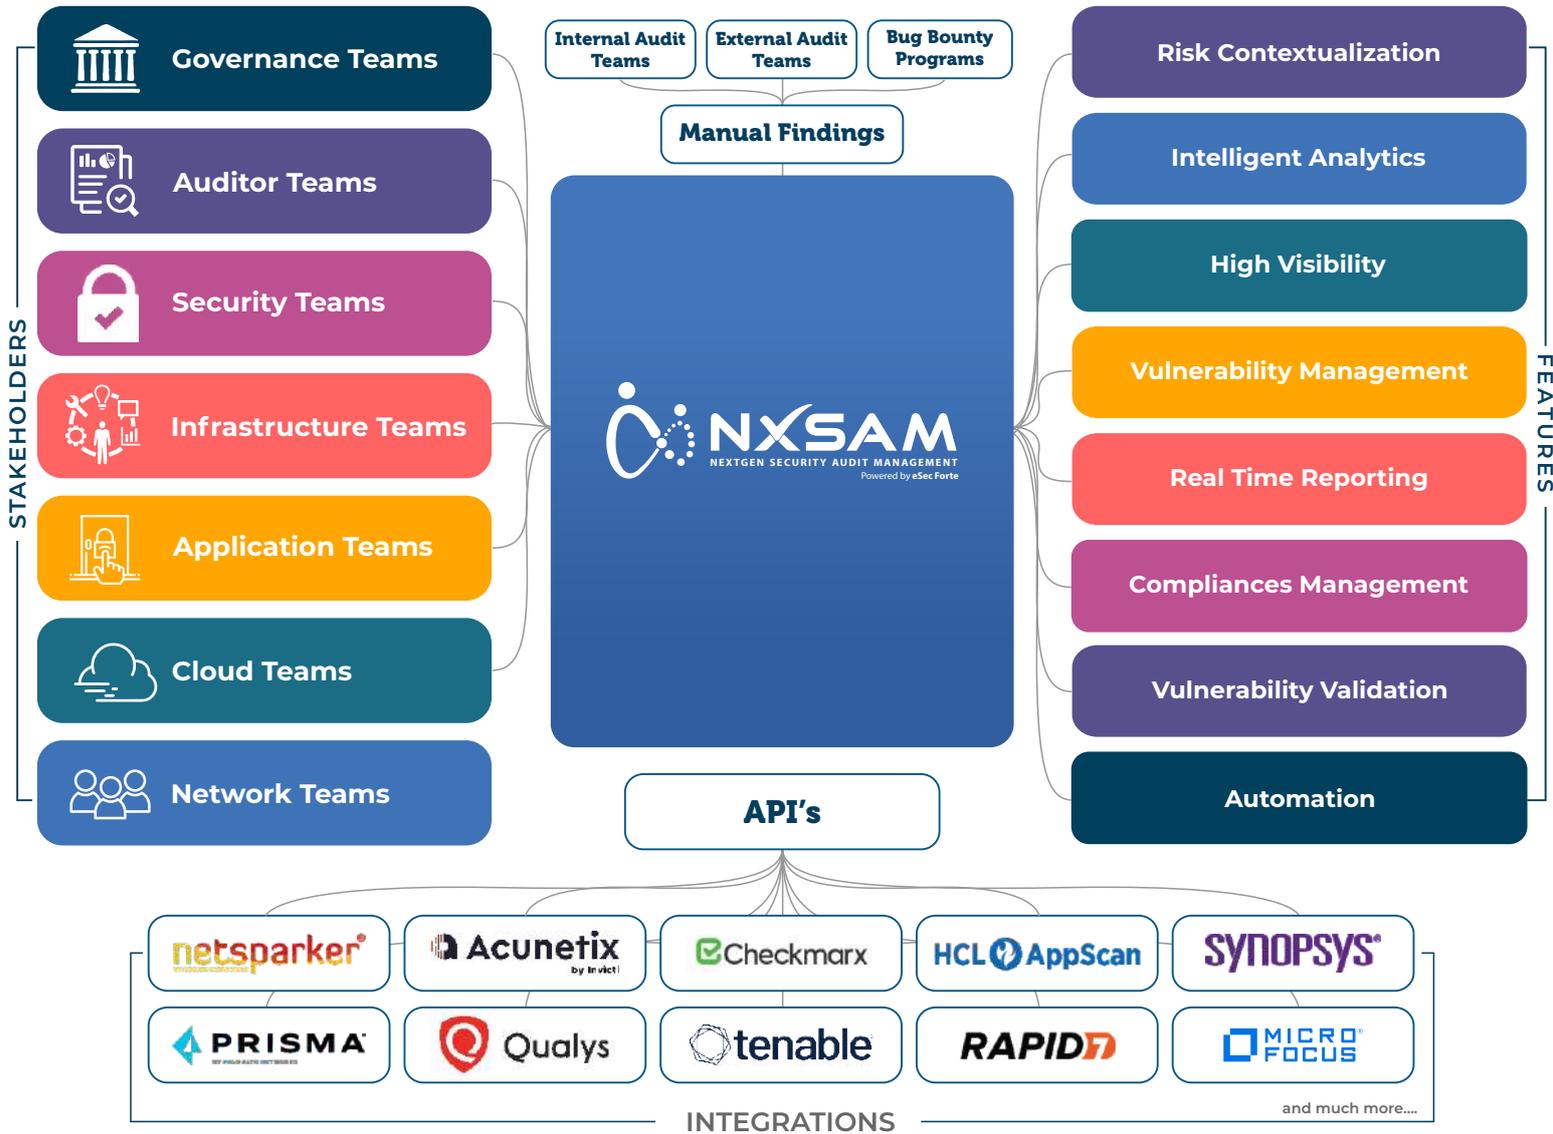

Common Dashboard

Report

Application Security Dashboard

NxSAM support different regulatory and compliance audits by providing complete vulnerability management cycle visibility right from discovery till closure along with artefacts.

NxSAM provides extensive out of the box reporting for Network, Web Application, Cloud and Mobile applications. Custom reports also can be created to support specific requirements.
